

Inventor**Club**

White paper

A Word from the Founders:

Welcome to Inventor Club. A company founded with the goal of helping entrepreneurs, inventors and start ups create the future we want. We believe entrepreneurs, startups and inventors are the catalyst to progress in our world. The inventor takes an idea and turns it into a prototype then the entrepreneur scales the invention so the masses can benefit. We see our NFTS as step one in a one hundred step stair. How can we create Web 3.0 infrastructure? How can we use our capital to advance AI in a way that's best for humanity? How can we push the boundaries of NFTs to provide more utility than any other project ever? What friendships, business deals, inventions will be created by a mastermind of 9200 entrepreneurs all in one place? If more people studied Benjamin Franklin, Elon Musk, Jeff Bezos, Leonardo Da Vinci & the other inventors featured in our collection, what ripple effect would that have?

The NFT space is brand new and no one knows the limits of what can be accomplished especially as the mainstream adopts them. We, with our community of 9200 holders will work together to discover what these limits are. Our aim is not to cater to the masses, our aim is to cater to those who believe in helping create the future. In other words cater to entrepreneurs, inventors and start ups.

We are creating a DAO and giving our Inventor Club holders equity in a holding company. Every company is successful in proportion to the merit of those on the team, as a result we are very specific about who we believe should own these NFTS. Casual flippers looking for a quick buck are not who this is for. Entrepreneurs, Inventors and Startup founders will be who make this endeavor long lasting. This is an extremely exciting time to be alive and we are honored to have you part of creating the future we want.

Thank you,
Inventor Club Team

ABOUT INVENTOR CLUB NFT

Inventor Club Overview

Inventor Club is Inventor NFTS inspiring the world with their creations. Each Inventor chosen has been studied by our founder and they were chosen because of the impact they've had on his & other entrepreneur's lives.

Inventor Club NFT Utility:

- 9,200 inventors with 13 different base characters, 18 different backgrounds, 13 different clothing items, 12 different inventions, and 6 skin colors.
- \$400K invested into start ups & NFT holders getting access to the holding company of start ups.
- 30 Ethereum given away to holders at sell out.
- Private mastermind with big names in entrepreneurship, crypto and the start up world.
- Turning our brand into the “Disney for entrepreneurs in the metaverse”.
- This entails creating merch, an Inventor Club world, a newsletter featuring Inventors and Inventor Club Shorts.

InventorClub

Private Mastermind

Our team has the privilege of being connected with world class entrepreneurs. In fact, our pre-sale was driven mostly by influential friend's of our founder. We won't drop names. If you search our founder's followers you'll see what we're talking about. As a result, our holders will have access to connect, network and do business with these individuals.

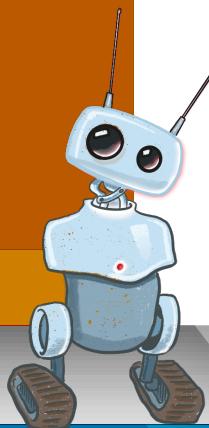

It starts with a private mastermind group on discord and will eventually evolve into events. Our founder several years ago helped sell out "Build Your Empire" events where big name influencers and entrepreneurs spoke to a group of attendees.

We envision the Inventor Club Mastermind as a place for our holders to create new friendships, business partners, share insider information, make money and create the future together.

Team

Our team consists of mostly veteran internet marketers. Two executives own marketing agencies, one has helped launch another well known NFT project that sold 4000 NFTs, and one has a software company that has raised \$1.5M in seed funding.

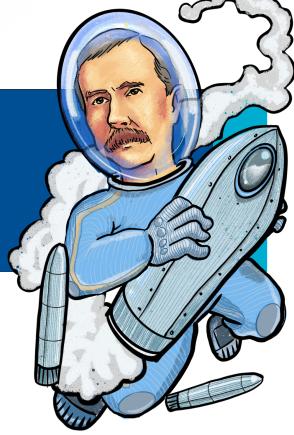

Vision

Our Vision is to use Inventor Club as a vehicle to help stay at the forefront of the future. Whether that's coming up with innovative NFT utility strategies, building the infrastructure of Web 3.0 or investing into AI, biotech and sustainable agriculture companies, this project is only the beginning. Inventor Club NFT is one step in a 100 stair step. 20 years from now NFTs and the metaverse will have evolved into something inconceivable today. Web 3.0 is changing rapidly and those who are involved today will be able to help create the future. In the short term we're creating a Dow and putting \$400,000 into Ai, Biotech and sustainable agriculture companies. These investments will be put into a holding company and shares will be given to our holders in proportion to NFT ownership.

In the short term we're also turning Inventor Club into a brand. That means creating our own world in the metaverse, creating merch and animated shorts. Imagine Disney for entrepreneurs in the Metaverse. Each Inventor featured in the our NFTs have made a massive impact on our world and our brand will inspire others to embody the same traits.

If you've studied Elon Musk, Jeff Bezos, Carnegie, Benjamin Franklin or any other Inventor featured you know they all emphasize long term thinking. Infact Jeff Bezos Is building a massive clock in the middle of Texas "As a reminder to future generations of the importance of long term thinking". We won't pretend we can predict where web 3.0 will be in that time frame. Everything is evolving rapidly and one new technology (like brain machine interfaces) could disrupt a plan. Our strategy is to pull back the bow, find our aim and time when we shoot. In other words, we will be ready with the team and resources to adapt with our rapidly changing world. However, with that said we are continuously contemplating and crystallizing what this can become in 5, 10 and 20 years.

What we can predict with high probability is our holdings will go up in value as those industries mentioned prior evolve, our community will continue to grow, our brand will become stronger and our team will grow in tandem.

Why Inventor Club

The harsh truth is most NFT projects won't last. They'll be a cash grab and the investors will lose out. This is partially because projects add extra risks (like issuing tokens or staking) instead of mitigating risk.

Intelligent investors choose to mitigate their downside as much as maximize their upside. By creating a DAO and giving holders equity in artificial intelligence, sustainable agriculture and biotech companies we are mitigating risk by tying NFT possession to REAL VALUE in the marketplace.

Most NFT projects have a team thinking short term and as result aim for short term profit. This is fine, however everything we do at Inventor Club is long term. We ask questions like: "What would it take to turn this into a billion dollar company?", "How will Inventor Club evolve in the next 20 years?". The result of this type of thinking is that we choose to reinvest earnings back into the company instead of laying on a beach in Bali.

When choosing our team we made sure each individual is obsessed with making our holders successful and not just in it for a quick buck. This is why we are fully transparent about who is involved in the project.

Disclaimer

The Inventor Club NFTs are not securities. Each NFT represents a single piece of art. Although, \$400,000 of the capital raised from these NFTs will be invested into seed round artificial intelligence companies, sustainable agriculture companies & bio technology companies.

These companies will then be put into a holding company and stock will be issued to members of our community. The specific companies chosen for investment will be a collaborative process amongst community members. "Voting Rights" on which companies should be invested in will be based on merit.

Why Invest Into Biotechnology, Artificial Intelligence and Sustainable Agriculture?

We believe these 3 markets will become the fastest growing markets of the next 20 years.

Biotechnology:

Humans since the start of the industrial revolution have found ways to augment our biology with technology. From the plow to the Iphone to wearables like Fitbits, Apple Watches, or the Oculus. Eventually we will have mass market brain machine interfaces & VR contact lenses.

Sustainable Agriculture:

The population of human beings is increasing. This means there are more people to feed. Chemicals used in today's food lead to diseases and a variety of other negative implications. Start up companies such as square roots (owned by Kimbal Musk) that are Vertical Farms are the future. People live in vertical apartments and will eat food that is grown vertically as well. Farms that produce grass fed meat will exist in tandem with planet based meat substitutes.

Artificial Intelligence:

If you ask 90% of the population whether artificial intelligence will be a bigger part of human life in 20 years from now they will probably say "duhhh". AI can either be the best tools humans have ever conceived or the most destructive weapons ever created. Our plan is to invest into companies that seek to decentralize AI. One country with a nuke fears every country with a nuke. The risk of a counter attack creates stability and peace amongst nations with Nuclear Capabilities. In theory, AI in the hands of many will create the same effect

Making intelligent Investment Decisions:

Any VC will tell you Seed Round companies are risky. Typically VCs bet 1 in 10 companies they invest in will be successful. However these successes disproportionately outweigh all losses.

To ensure the highest probability of success we will "mobilize" our community. In other words, create a DAO. Imagine 1000 people researching the founding team of

one of our potential investments! Our community can pick apart every little detail. Our community can also generate enough word of mouth to increase the probability of success of our investments!

Think of this, we choose companies with amazing product and then our community spreads the word about these product. Helping solve marketing problems. The founding team of Investment Club are veteran internet marketers that own marketing agencies. These agencies can be used to increase the probability of our investment's succeeding as well.
